

QUADRANT 2.0 UPGRADE INFO:

Customers who purchased Quadrant 1.x via **our website** have been sent an exclusive \$25 upgrade offer email via DPD.

This is a **separate email** from the launch email we sent to our Mailing List, which is sent to everyone who is signed up, regardless of where they purchased the plugin. However, the actual upgrade email is sent separately, only to customers who purchased from our site - i.e. you must upgrade from the same source you purchased the previous version.

Customers who bought Quadrant 1.x within 30 days of the 2.0 product launch are eligible for a free upgrade (this only applies to purchases made directly on our website and must be done manually by our support team - please **contact us via email for assistance**)

Please get in touch with us via email if you need any assistance with your order: glitchmachines.sales@gmail.com

Customers who purchased Quadrant 1.x via Plugin Boutique must upgrade via their website (upgrade cost: \$25 USD).

Customers who purchased Quadrant 1.x via VSTBuzz must contact Plugin Boutique customer support for assistance with upgrades.

Plugin Boutique will have Quadrant 2.0 available as soon as possible; please contact **their support team** with inquiries on availability or if you require assistance with your upgrade: <https://support.pluginboutique.com/hc/en-gb>

NOTICE:

- This is a **64bit**-only **VST3** or **Audio Unit** plugin - please ensure compatibility with your system **prior** to purchasing an upgrade. Minimum System Requirements are posted toward the bottom of the Quadrant web page: <https://glitchmachines.com/products/quadrant/>
- Quadrant 2 is **NOT BACKWARDS COMPATIBLE** - back up your relevant DAW session **prior** to upgrading.
- Patches constructed on earlier versions of Quadrant are **not compatible** with version 2.

Although you are free to continue to use the old version (Quadrant 1.x), it has now been **discontinued** and no longer available publicly. If you wish to continue using it in the long run - for example with an older machine - it is your responsibility to keep a backup of the installer and relevant files.
